What is the difference?

GLASS ETCHING

1

NO IT ISN'T THIS...

Glass etching is the roughening of a piece of glass in selected areas in order to produce a design. It is a way to produce a "frosted" design on the surface of a piece of glass.

CHEMICAL ETCHING

2

STILL NOT THIS...

Pretty much the same as glass etching BWTL..glass etching & sandblasting sometimes look identical...take a look at the bottom of your beer glass...Cheers.

HEAT PRESSED EMBOSSING

3

WE DO THIS BUT ITS NOT THIS ...

Fonts or designs are heat fixed into the surface of the material, by varying depths. typically used on rich mahogany...& many leather bound books..sorry couldn't resist..)

VERY POWERFUL

LASER ENGRAVING

YES ! THIS IS IT !!!!
